1.	Scope of this Milestone	3
2.	Open Access Repository in ZENODO	3
3.	Publications in Google Scholar	3

## 1. Scope of this Milestone

The purpose of this report is to provide the support for documentation of the DEVOTES open access repository as of 30<sup>th</sup> April 2016 (Month 42). This was reported in the Description of Work (Milestone 33 – MS33) as part of dissemination activities undertaken in the context of the Task 7.2.3 “Open access to scientific papers, reports, methods & tools”. Although the lead party of this MS is NILU, the responsibility of these activities was transferred to Ecoreach during the Kick-off meeting of the project, when a reallocation of the duties on WP7 was discussed. Therefore, Ecoreach is the main author of this Milestone and is leading the activities.

## 2. Open Access Repository in ZENODO

To achieve the specific objective of allowing the open access to the DEVOTES results and outputs, ECOREACH created a repository of scientific papers produced during DEVOTES life, named “FP7 EU DEVOTES Community” in ZENODO, the OpenAIRE ‘orphan repository’. The DEVOTES Community, available under the link <https://zenodo.org/collection/user-devotes-project> was created in Month 16. Moreover, a dedicated webpage has been created in the DEVOTES website (<http://www.devotes-project.eu/publications/>) with the list (and link) of all the papers in the ZENODO DEVOTES community.

Since then, Ecoreach is uploading Open Access papers and/or preprints of all publications produced in DEVOTES, and sending regular reminders to the partner in order to maintain the Community updated. With this repository DEVOTES is accomplishing one of the most important objectives of the FP7 Programme, which is the free access to all the research outcomes to scientists and public at large.

## 3. Publications in Google Scholar

In addition to Zenodo, Ecoreach (in collaboration with AZTI) created a Google Scholar profile of DEVOTES (<https://scholar.google.it/citations?user=oSH2JTkAAAAJ&hl=it&oi=pll>), in which all papers are listed. This allows scientists to see information on papers published by the project, consult the citations received by each paper, rank them, and obtain the  $H_{index}$  of the project, as a sort of the success of the research and publications.
